4. Recommendations

1.1 Acknowledgement

Understanding the environmental impact of operational activities is of utmost importance to any industry. It holds significant value for organizations, particularly in the IT sector, where energy consumption and resource efficiency play a crucial role in sustainability efforts. Accounting for carbon footprint is the first step toward enhancing both ecological and economic performance.

It is commendable that the management of M/S Cybage Software Pvt Ltd., which operates seven sites across India, including its Head Office in Pune (WAD), is committed to tracking greenhouse gas (GHG) emissions resulting from its activities. The primary objective of this carbon accounting assessment was to establish a baseline by measuring the company's current emission levels under Scope 1, Scope 2, and Scope 3 categories.

I extend my gratitude to the management of Cybage Software Pvt Ltd. for entrusting ESGwithSK with this assessment. Additionally, I sincerely appreciate the cooperation of the team members during the data collection and fieldwork process.

Data Collection Period:

15th February to 3rd March 2025

2.1 Organizational Boundary

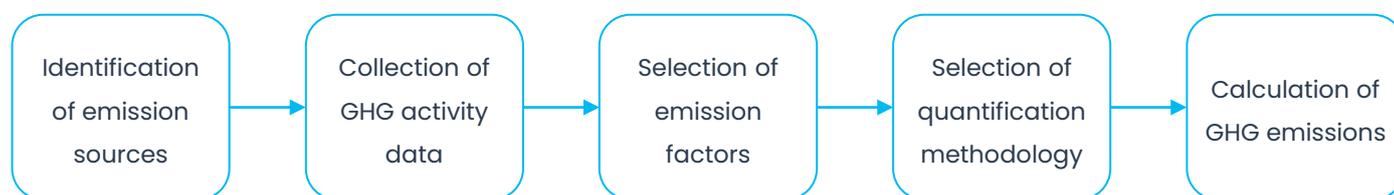

Base year: 2024

Operational Boundary

The GHG emissions inventory covers direct and indirect emissions from the Pune head office (WAD) and six operational sites across India, with 2024 as the base year.

2.3 Methodology

The report follows GHG protocol a corporate accounting standard and corporate value chain accounting standard.

2.4 Justification for Scope and Category Exclusion

Scope /Category	Description	Status	Justification
Category 02	Capital goods	Excluded	Not applicable
Category 08	Leased assets	Excluded	Not applicable
Category 9	Transportation beyond courier	Excluded	Not applicable
Category 10	Processing of sold product	Excluded	Not applicable
Category 11	Use of sold product	Excluded	Not applicable
Category 12	End of life of sold product	Excluded	Not applicable
Category 13	Leased assets	Excluded	Not applicable
Category 14	Franchise	Excluded	Not applicable
Category 15	Investments	Excluded	Not applicable

2.4 Justification for Scope and Category Exclusion

Scope /Category	Exclusion Justification
Category 2: Capital Goods	Cybage Software Private Limited confirms that there were no purchases or commissioning of capital goods during the 2024 calendar year. The company did not undertake any new capital investments in hardware, IT infrastructure, office construction, or equipment that would fall under the definition of capital goods as per Scope 3 – Category 2 of the GHG Protocol.
Category 8: Upstream Leased Assets	Cybage Software Pvt. Ltd. does not have any upstream leased assets (GHG Protocol Scope 3, Category 8) that fall under the reporting boundary for the current assessment period. As a software services company, Cybage's operations are primarily office-based, with no significant leased assets (e.g., manufacturing equipment, vehicles, or facilities) that contribute to upstream emissions. Therefore, this category is not applicable to our GHG inventory.
Category 9: Downstream Transportation & Distribution	Cybage Software Pvt. Ltd., being a software services company, does not engage in the physical transportation or distribution of sold goods. Our business model primarily involves digital service delivery, which does not generate downstream transportation or distribution-related emissions under GHG Protocol Scope 3, Category 9. Therefore, this category is not applicable to our GHG emissions reporting.
Category 10: Processing of Sold Products	As a pure-play software services company, Cybage Software Pvt. Ltd. does not manufacture, process or sell any physical goods or intermediate products that would require downstream processing by customers. Our services consist entirely of digital solutions and IT services that do not involve any form of physical processing after delivery. Therefore, GHG Protocol Scope 3 Category 10 (Processing of Sold Products) is not applicable to our operations.
Category 11: Use of Sold Products	<p>Cybage Software Pvt. Ltd. operates as a pure-play IT services and software solutions provider, delivering digital products and services that do not require physical usage or energy consumption by end-users. Our offerings include:</p> <ul style="list-style-type: none"> • Custom software development • Cloud-based solutions • AI/ML and data analytics services • Digital consulting
Category 12: End-of-Life Treatment of Sold Products	Cybage's services are intangible and digital, meaning there are no physical products requiring disposal, recycling, or waste treatment at end-of-life.
Category 13: Downstream Leased Assets	Cybage does not lease any operational assets (e.g., buildings, vehicles, equipment) to third parties.
Category 14: Franchises	Cybage operates as a single corporate entity without franchisees, licensees, or third-party distributors.
Category 15: Investments	Cybage maintains a conservative investment portfolio with no equity stakes in non-consolidated entities requiring emissions reporting.

3.3.C Calculating Upstream Emissions

1. Purchased Electricity – Upstream Emissions

- Cybage’s total electricity use (from Scope 2): 8,236,464.15 kWh
- Emission factor used for Scope 2: 0.716 kg CO₂/kWh (CEA v19)

However, this covers **direct Scope 2 emissions only**, not upstream or T&D losses.

1. **Upstream generation emissions** (fuel extraction, processing & transport).
2. **T&D Losses:** Emissions due to electricity lost between generation and your site.

2. T&D Loss Emissions Calculation for India

As per the CEA (Central Electricity Authority, India) 2024 data:

- National average T&D loss = ~20.1% (India)
- Upstream emissions factor = ~0.123 kg CO₂/kWh (for upstream fuel cycle)[Ref: CEA, IEA, and DEFRA approximations for India]

A. T&D Losses:

- Total consumption: 8,236,464.15 kWh
- T&D losses = 20.1% → T&D kWh lost = 8,236,464.15 * 0.201 ≈ 1,655,528 kWh
- Emissions from T&D loss = 1,655,528 * 0.716 = 1,185,556 kg CO₂ = 1,185.56 t CO₂e

B. Upstream Generation Emissions:

- Upstream emission factor = 0.123 kg CO₂/kWh
- Upstream emissions = 8,236,464.15 * 0.123 = 1,013,085 kg CO₂ = 1,013.08 t CO₂e

Total Upstream + T&D Emissions from Purchased Electricity: 1,185.56 + 1,013.08 = 2,198.64 t CO₂e

3. Upstream Emissions from Purchased Fuel

- Diesel used = 18,161.39 L
- Emission factors (DEFRA 2023):
 - Well-to-Tank for Diesel = 0.59 kg CO₂e/litre
 - Upstream emissions from fuel: 18,161.39 L * 0.59 = 10,716.22 kg CO₂ = 10.72 t CO₂e

4. Summary of Category 3 (Upstream) Emissions (Category 3)

Source	Description	Quantity (t CO ₂ e)
Electricity – T&D losses	20.1% loss on 8.23 million kWh	1,185.56
Electricity – Upstream generation	0.123 kg CO ₂ /kWh	1,013.08
Fuel – Upstream extraction/transport	0.59 kg CO ₂ /litre of diesel	10.72
Total Category 3 Emissions	(Purchased energy-related)	2,209.36

3.3.D Scope 3 – Transpiration & Distribution (category 4)
